

## TWS NS26 AUSTRALIAN MADE

### **How thick do you apply the product?**

A liberal spray coat is to be applied until the product no longer absorbs and beads on the surface

### **At what distance away should you hold the nozzle to the object being waterproofed?**

A few centimetres from the surface would be best application, allowing the product to be applied to the surface liberally.

### **Do you need to repeat the application and if so, how frequently?**

You shouldn't need to repeat application, though this all depends on the use and type of weather over the surface.

If required, you would be able to re-coat the surfaces every 10 years if deemed necessary.

### **Does it have to dry fully between applications?**

Yes, you want the first coat and the surface area to be completely dry between applications

### **Do you have to keep shaking the bottle to keep the chemicals/ingredients mixed whilst applying?**

You can give the bottle a shake before starting your application, though while applying our NS26 it wouldn't require further shaking.
